## PROFESSIONAL SUMMARY

Results-driven Software Engineering undergraduate at NSBM Green University with hands-on experience in full-stack and mobile application development. Proficient in React, Next.js, Java EE, Python, and Flutter with cross-platform mobile development expertise. Demonstrated ability to design, develop, and test scalable applications using Agile methodologies. Seeking a software engineering internship to apply technical skills, contribute to a professional team, and accelerate growth in a real-world development environment.

## TECHNICAL SKILLS

|                                 |                                                                                                            |
|---------------------------------|------------------------------------------------------------------------------------------------------------|
| <b>Frontend Development</b>     | React.js, Next.js, HTML5, CSS3, TailwindCSS, Responsive Design, UI/UX Prototyping                          |
| <b>Mobile Development</b>       | Flutter, Dart, Cross-Platform (Android & iOS), BLoC/Provider State Management                              |
| <b>Programming Languages</b>    | Java, Python, Dart, JavaScript, PHP, SQL                                                                   |
| <b>Backend &amp; Frameworks</b> | Java EE, Spring Boot, Node.js, Express.js, .NET (C#), MERN Stack                                           |
| <b>Databases &amp; Tools</b>    | SQL Server (SSMS), MongoDB, Firebase, Git, GitHub, Figma, Streamlit                                        |
| <b>Core Competencies</b>        | OOP, Software Quality Assurance, REST API Integration, Manual Testing, Agile/Scrum, CI/CD (GitHub Actions) |

## EDUCATION

**BSc (Hons) in Software Engineering** | NSBM Green University, Sri Lanka *Expected: December 2027*

- Relevant Coursework: Object-Oriented Programming, Software Quality Assurance, Web Application Development, Database Management, Mobile Application Development, Agile Software Engineering

## G.C.E. Advanced Level – Physical Science Stream

| Combined Mathematics – S | Physics – C | Chemistry – C

## ACADEMIC & PERSONAL PROJECTS

### GoviMaga — Agricultural Mobile Application [GitHub](#)

*Flutter · Dart · BLoC/Provider State Management · Firebase · REST API · Android & iOS*

- Developed a cross-platform Flutter mobile application targeting Sri Lankan farmers, delivering agricultural advisory features for Android and iOS from a single codebase.
- Integrated OpenWeatherMap REST API with GPS-based location queries to provide real-time, hyper-local weather forecasts and farming advisories.
- Implemented BLoC and Provider state management patterns to maintain predictable, testable UI state across complex navigation flows and multiple screens.
- Engineered Firebase Cloud Messaging (FCM) for push notifications, delivering timely alerts for weather changes and crop advisories.
- Optimised widget rendering pipeline and implemented lazy loading, achieving consistent 60 fps performance on low-end Android devices.
- Conducted cross-platform testing across multiple device form factors and OS versions to ensure behavioural consistency on Android and iOS.

## **Bidzy — Real-Time Logistics Bidding Platform** [GitHub \(Backend\)](#) | [GitHub \(Frontend\)](#)

*Next.js · React.js · .NET · C# · WebSockets · REST API · TailwindCSS*

- Contributed to a full-stack logistics marketplace enabling shippers to post shipping requests and carriers to bid in real-time through a dynamic, competitive bidding interface.
- Developed RESTful API endpoints using .NET (C#), implementing business logic for bid management, user roles, and shipping request lifecycle.
- Implemented real-time WebSocket communication to deliver live bid updates, ensuring a seamless and responsive experience for both shippers and carriers.
- Built a reusable component library in React with Next.js server-side rendering (SSR), improving page load performance and SEO.
- Collaborated in an Agile team environment using Git feature branching, pull requests, and code reviews across frontend and backend contributions.

## **HyperPOS — Point-of-Sale Frontend System** [GitHub](#)

*React.js · Next.js · TailwindCSS · Spring Boot · Java · REST API · Figma*

- Designed and developed a fully responsive POS frontend interface, prioritising fast transaction workflows and intuitive UX for retail environments.
- Integrated with a Spring Boot (Java) backend via RESTful APIs, handling product management, sales transactions, and inventory data flow between frontend and server.
- Built a reusable React component library reducing code duplication and improving maintainability across POS modules.
- Leveraged Next.js dynamic routing and SSR to improve page load performance and ensure smooth navigation.
- Translated end-to-end Figma design systems (wireframes → high-fidelity prototypes) into production-ready code with pixel-perfect accuracy.

## **LatteLane — Café Web Application** [GitHub](#)

*React.js · Next.js · TailwindCSS · PHP · REST API · UI/UX*

- Built a full-stack café web application featuring a product catalogue, menu browsing, and order management with a modern, responsive UI.
- Developed backend logic and RESTful API endpoints using PHP, handling menu data, order processing, and server-side business rules.
- Designed and implemented reusable React UI components following accessibility best practices and a consistent design system.
- Connected frontend to PHP backend via REST API calls for dynamic menu rendering and real-time order workflow management.

## **AI-Powered Assignment Helper** [GitHub](#)

*Python · Streamlit · Groq API · REST API Integration*

- Developed a lightweight AI-driven web tool using Python and Streamlit to assist with academic content generation and structured output formatting.
- Integrated the Groq API for natural language processing, handling text inputs and generating structured, context-aware outputs.
- Deployed with an intuitive UI enabling non-technical users to interact with AI capabilities without prior technical knowledge.

## **CI/CD Pipeline — GitHub Actions Learning Project** [GitHub](#)

*GitHub Actions · CI/CD · YAML · DevOps*

- Designed and implemented automated CI/CD workflows using GitHub Actions, including build, test, and deployment pipeline configurations.
- Wrote YAML workflow files to automate code quality checks, unit test execution, and artifact generation on every push and pull request.

## EXTRACURRICULAR & PROFESSIONAL DEVELOPMENT

---

**Student Research Participant – NSRSIT 2026** | NSBM Student  
Research Symposium on Information Technology

2026

- Engaged with cutting-edge research in software engineering, AI, and emerging technology trends.
- Networked with academic professionals and industry peers, broadening understanding of research-driven development practices.
